FOR IMMEDIATE RELEASE

THE LEWIS MACHINE & TOOL 6.8 BARREL *THE NEW QUICK-CHANGE OPTION FOR PRECISION MARKSMEN*

MILAN, IL (February 2, 2008) – Lewis Machine & Tool Company, an Illinois based company that designs, prototypes, and manufactures small arms, accessories and tooling components for law enforcement, military, commercial manufacturers, and responsible civilians, is introducing a new MRP and CQB MRP barrel in 6.8, the same caliber currently under rigorous field testing by the U.S. Army.

The 6.8 has been proven to be more accurate at longer distances and have greater hitting impact than the currently used 5.56 carried by U.S. troops. Always in the forefront of development and design, LMT's new 6.8 barrel provides an option for those already carrying an MRP in 5.56. Literally, with no armorer or gunsmith required, an operator can quickly install the 6.8 barrel, bolt and magazine while in the field with just the supplied installation wrench. With no loss of zero during the change-out, the operator can resume shooting with the highly accurate and hard hitting 6.8.

The chrome-lined 6.8 barrels are available in 12.5" and 16" lengths with 1:7" twist. Stainless MRP 12.5" and 18" barrels are available as an upgrade option.

Lewis Machine & Tool Company, an ISO 9001:2000 company and GSA supplier since 2005, was founded in 1980 in Milan, Illinois, with the mission of designing and producing the highest quality products for military and government agencies. Lewis Machine & Tool Company, known for their innovative Monolithic Rail Platform, provides customers with the highest standards in design, engineering, and quality assurance in everything they manufacture from custom firearms to accessories.
